THIRTY-EIGHTH REPORT

OF THE

INSPECTOR

REFORMATORY AND INDUSTRIAL SCHOOLS IN IRELAND.

TO THE

RIGHT HON. GERALD W. BALFOUR, P.C., M.P., &c., &c.,

CHIEF SECRETARY TO THE LORD LIEUTENANT OF IRELAND.

OFFICE OF INSPECTOR OF REFORMATORY AND INDUSTRIAL SCHOOLS IN TRELAND,

DITITUDE CASTLE. 3rd August, 1900.

Str.

I have the honour to submit to you the Annual Report on the Reformatory and Industrial Schools in Ireland, for the year ending the 31st December, 1899.

The same number of schools was under inspection this year as last, viz.:-6 Reformatory and 71 Industrial Schools. Each school has been visited at least once during the year, and

surprise visits were paid on one or two occasions to most of them. A formal examination in the literary work of each school was

held by the Assistant Inspector.

REFORMATORIES.

Of the 6 Reformatory Schools in Ireland-2 are for Roman Catholic Boys. 3 ", Girls.
I for Protestant Boys.

There is no Reformatory School in Ireland for Protestant girls. This is a want that should be provided for.

In 1895 the Cork-street Reformatory, which was the only Reformatory ever established in Ireland for Protestant girls, was closed owing to want of funds. Since that date the question of establishing one in Belfast has been repeatedly considered, but without any practical result.

There is not much likelihood that a sufficient number of cases would be committed to enable the management to support an institution of the kind on the monies received from the Government and local bodies.

The number of Protestant girls under 16 years of age committed to prisons in Ireland for each of the five years 1895-99 is as follows :- 2 in 1895, 4 in 1896, 4 in 1897, 2 in 1898, and 13 in 1896 I am unable to say how many (if any) of these cases would probably have been committed to a Protestant Reformatory School for girls, had such been in existence.

There is no reason, however, why a small Reformatory should not be established in connection with some other institution of a kindred nature. It could be kept separate and distinct as far as intercommunication with the other inmates was concerned, while it would benefit by the joint management and support.

There are precedents for a union of this kind in the 3 Refor-

matories for Roman Catholic girls in this country.

In Monaghan there is a Reformatory and Industrial School in the same institution. There are very few Reformatory cases in this school, and the Reformatory could not be carried on if it had not the indirect support, which it receives through being under the same management as that of the Industrial School. In High Park there is a Penitentiary and Reformatory School under the same management; and in Limerick there is a Penitentiary. Reformatory, and Industrial School, all under the same management.

In each of these the work of the Reformatory and Industrial School is carried on in the most efficient manner, and the results obtained are most satisfactory.

The following Table shows the number of children in Reformstory Schools on 31st December, 1898, and on 31st December, 1899 :--

						On 31st	Decemb	er, 1898.	On \$1s	b Decemb	ez, 1899.
						Males.	Fe- males.	Total.	Males.	Fe- males.	Total.
In School,						618	68	571	594	157	581
On License,						27	2	29	21	1	23
In Prison, .						-	-	-	-	-	-
Abecouded-se	nter	oce t	inea	pire	đ,.	3		3	4	-	
In School-ser	tene	0 6X	pire	đ,		-	-	-	-	-	-
	Total	1,				548	- 55	608	629	18	687

During the year 122 cases were committed to Reformatories This shows a decrease of 24, as compared with the number committed in 1898.

I would hope that, with greater attention to the committal of suitable cases to Industrial Schools by directing at an earlier stage the course of juvenile delinquency towards them, the numbers going to Reformatories will be still further reduced.

Of the total admissions 103 were sent direct. The remaining 30 were admitted after a term of migratures, and of this number 5 were children about 11 years of age, who were not previously contricted; 2 children ender 13 years of age, who were sent to Reformatories without previous 12 years of age, who were sent to Reformatories without previous 10 m my former Reports of the migratures of the 10 m my former Reports drawn attention to the great need than in any former made in this direction by the members of the Philades and the different made in this direction by the members of the Philades and the different made in the city will soon mede with access.

The number of juveniles committed, and the offences, for which they were sentenced for, were—100, larceny; 2, housebreaking; 2, burglary; 3, assault; 3, vagrancy; 12, other offences In 66 cases both the parents were living, 2 being destitute or criminal; in 9 both parents were dead; in 31 the father wassdead; and in

16 the mother.

State of Instruction on Admission—38 could neither real nor write, 38 could read and write imperfeetly, and only 11 could read and write well. It appears from the above figures that the great majority of those committed were either litterate or very imperfectly instructed. This fact strengthens the opinion that strength of the committed was either militerated and carrying out the provisions of compalory education, and induce them to take advantage of its compalory power.

The health of the inmates has been very good; only one death

occurred during the year.

Literary and Industrial Training—These subjects are, as usual, carefully stended to, and the greater efforts made in this direction have produced marked improvement in some of the schools. There is however, still nucli room for further improvement. There should be less drudgery than I have seen. The literary and industrial work. No boy should be spect continuously engaged at a class of work which he cannot follow with profit when he is discharged.

A more intelligent system of farming and gardening than bleins at present should be followed. One that combines theory with practice would, I am sure, cause the boys to take a more intelligent and pleasurable interest in their work, and render them more capable of obtaining and retaining good employment when

they leave school.

Mode of Discharges.—The crucial test of the value of the work toos in a school is the way in which the immakes are disposed of at the end of their term of detention, and their conduct for some time after they leave the school. Of 138 who were discharged, &c., during 1899, 39 went to service, 62 returned to friends, 10 emigrated, 21 enisted, -1 died, 1 absonded, and 4 were

discharged, being illegally committed. The objectionable feature, and the one most difficult to contend with in the disposal of boys or girls, is to allow them to return to their friends.

I am aware that Managers are fully conscious of this, and do all they can to induce the young people to make an independent start in life. To enable boys and girls to do this every effort must be made to provide such with a trude or calling which here she is competent to till, not only in a mechanical, but in a thoroughly intelligent way, and to develop the virtues of self-respect and self-relance.

In the three years 1369, 1597, 1898 the number discharged was 492. Of those 368 were doing well, 7 were dead, the was 492. Of those 368 were doing well, 7 were doubtful cases, 31 were conviteded, 5 were tanknown, and I was recommitted to a Reformatory. This is a very satisfactory record, having regard to the many difficulties Managers have to contend with both in the training and disposal of their children.

A pleasing feature in the disposals is the number that entered the army. In 1899 21 boys enlisted, while in the three previous

years only 24 entered the service.

I do not know a better way of disposing of lade of this class than by putting them into the army, and the record of those who have no should be not specificated by the constraint of a most gratifying character. Almost all do well, and many attain the highest and most lucrative position their grade, owing to their good education or good training as musicans or tradsumen.

The numerous letters and photographs Managers receive from thir soldier boys are convincing proofs of the paternal care and interest taken in them, as well as of the suitability of the calling they selected. I have asked Managers de encourage in every way boys to enter the service, for I consider that, as a rule, it is the calling best adapted for them. They generally possess that reakiese during disposition, which, while it needs discription and restraint, gives promise of fine soldierly quality sprawles devoting themselves to the service of the collective quality spr and the contractive of the

FINANCIAL STATEMENT-REFORMATORY SCHOOLS.

The following Table shows the amount received from the Treesury, local rates, other sources, and by industrial profits, during the past two years:—

	-					18	83.		18	99.		Ine	60.5	ie.	Dec	rea	HE.
					_	£	ε.	d.	£	e.	d.	£	a.	d.	£	a.	d.

INDUSTRIAL SCHOOLS.

There were 71 Industrial Schools in Ireland during the year 1899. No new ones were established, nor was there any increase in the number of certificates granted to existing ones.

The following Table gives the number of children under detention in these schools on 31st December, 1898 and 1899:—

	On 31st	Docemi	ber, 1898.	On \$1st	Decemi	bor, 189
	Males.	Fo- males.	Total.	Malos.	Fo- males,	Total
In School (within number paid for under the Rules). In School (in excess of the number paid for, or under 5 years of age). Total,	. 3,195	550	3,745	4,276	461	4,677	

The only notable change that occurred in the schools during the year was the relinquishing of the Grampian Training Ship in Belfast, and the transference of the boys from it to a land school at Balmoral. This school is situated a few miles from the city, and has accommodation for 350 boys-250 of whom were inmates of the Grampian, while the remaining 100 were trans-ferred from Fox Lodge the previous year. The latter was a land school for junior boys connected with the Training Ship. The Balmoral Institution is emineutly adapted for its purpose.

It is a well-built, well-arranged structure, having most of the essentials required for a school, without any useless adjuncts. There is sufficient land attached, and it is exceptionally well situated, being within easy reach of the city, from which it gets

an abundant water supply, gas, &c.

Mr. Barclay, the late Manager, died towards the end of the year, and he has been succeeded by Mr. M'Dowell. The School Committee is composed of a most capable and zealous body of gentlemen, who, with the aid of their excellent Manager, will, I am sure, make their institution one of the most successful in the country.

The abandonment of the Training Ship, and the transfer of the boys to a land school, were decided on after mature and careful consideration by the Committee of Management. In this decision they had the concurrence of my predecessor, and as soon as I gave this question sufficient consideration, I had no hesitation in giving my sanction to the proposal. After an experience of twenty-eight years, the Committee felt that they were not justified in pursuing a system that gave such poor results. They found that the per-centage of their boys who adopted a seafaring life was very small, and that many of those, who at first followed it, after a time gave it up for some other calling. Besides this, there was a large number of them unsuited for the training, who could have been better attended to in a land They were of a delicate nature, and the life on a stationary ship in an insalubrious position was not conducive to their healthy development.

The question of setting apart certain Industrial Schools to train boys for a seafaring life is one that has engaged my attention for some time, and from what I have observed in the Training Ship, the Baltimore School, and the Killybegs Fishery School, I am satisfied that in none of them have the high expectations of their

founders been realised.

The Training Ship in Belfast, after twenty-eight years of a not very successful effort in its special work, has been abandoned. Baltimore Fishery School, which during a chequered career since 1887 has given almost barren results (only three boys having been sent to sea during the three years 1895, 1896 and 1897), has within the past couple of years settled down to do the work of an ordinary Industrial School; but it still makes the department in connection with the scafaring life a prominent feature in its curriculum.

In this respect it very properly does not aim too high. Its efforts are limited by the amount of funds at its disposal, and its methods of training are adapted to the capabilities of the children. While boat-building, cooperage, fish-curing, and netmaking are special features, other industries, such as tailoring

gardening, and farming, are not neglected.

Killybege was certified in 1806 as a Marine and Agricultural School for training boys in the trades connected with the capture and curing of fish, and in agricultural pursuits. Up to the same was the contract of the contract of the contract of the arised that as a piecastrial school there is but a poor future before it. Seven boys are instructed in boat-building, and others are taken out in rowing toots and practise line-fishing.

It seems to me that the mistake made by the founders of these institutions was that they did not take into consideration the conditions under which an Industrial School must necessarily exist. In their laudable enthusiasm to further a good cause, they forgot to consider the means they had to employ to attain their end. Lads of the stuff out of which sailors and fishermen can be made are not supplied to order to our Industrial Schools. Managers must take not what they wish, but what they can get. The children committed are chiefly drawn from the slums of cities and towns, poorly developed in mind and body. Ranging in age from six to fourteen years when admitted they must all be discharged at the age of sixteen. Under these conditions it is not to be wondered at that the number who, select a senfaring life, or are suitable for it, is so small. Nevertheless, I believe that under existing conditions a great deal can be done to foster the object for which these schools were established.

As in other schools the boys should receive a sound elementary columation, and have their intellects developed and their families educated by a proper course of manual instruction, and while training in other industries is carried on, the one pertaining to a scafaring life should be made the special feature of the school. At the best it need not be expected that more than a small per-centage of the long at these Marins Schools will take to a seafaring life.

FINANCIAL STATEMENT.

The following Table shows the amounts received during the past two years from various sources:—

			1898.			1899.			reas	Decrease		
Received from Treasury, Do. Local Rates, Do. Other Sources Estimated Profit, Total,		£ 101,255 41,351 6,436 10,373	0 14 16	7 3 3 3 3	£ 100,524 55,678 6,628 10,178	5 1 9 11	9 7 5 4)	14,217	1 15	1	£ £	

"This increase is due to the fact that in 1899 almost all the new County Councils, besides clearing off outstanding arrears, paid their contributions for the year as well.

Expenditure.

The following Table gives the expenditure during the past two
vears:—

	1858.	1890.	Increase.	Detrease.
	£ s. d.	£ 4. d.	E s. d.	£ e. d.

Loss on Industrial Depart- ment.	262 18 11	82 4 3		190 14 8
Total,	166,216 3 8	165,125 14 11	3,644 17 3	3,785 6 4

Having regard to the large sums received annually for the maintenance of children in Industrial Schools, amounting from all sources to £172,809 for the year, I think it desirable that a more careful inquiry should be made into the financial accounts of the school sthan has been done hitherto.

I have observed in several schools what appears to me to be foolish extravagance in matiers in ne way sessitiat to the interests of the children, such as coally and oftentmess uncless additions to, or structural changes in, the school buildings, the exection of model farm buildings on an extensive scale purchase of land beyond the school requirement of the production of

I think Managers should not undertake any scheme involving a large outlay of school funds proper, without previously consulting with the Inspector of Industrial Schools. If such a course were adopted, the true interests of the school might be better served, and there would be less risk of the project turning out an expensive fad by saddling the school with a debt. The acquisition of land on a large scale, unnecessary for the

The acquisition of land on a large scale, unnecessary for the immediate purposes of the school, seems to mo to be a very representable practice, especially so if the interest or capital has to be of the control of th

I think it would be desirable that the accounts of sech selectional by properly andited by a qualified accountant, before the annual reterns are furnished to this Department. This is done. In several of the achood with very satisfactory results. Managers, I am sure, will welcome the fullout investigation. It will enable the Impactor to satisfy himself with reference to mattern of questionable expenditure, strengthen, the Manager's the school to be conducted on sound business. First I have reason to, know is not the case at the present time in many of the schools of

In the case of schools that are well managed in every particular, and to the entire satisfaction of the Inspector, I see no necessity tor strict inquiry into their financial accounts; but where the want of funds is pleaded as an excuse for not providing the

essential needs of a school, I think the strictest investigation should be made into the state of the finances.

anoun oo made into the state of the finances.

In regard to sum contributed by the local bodies, it would be well if they were more uniform in amount and distribution. At well if they were more uniform in amount and distribution. At they from 1s, to 2s. 6d, per week for each child. The contributes in many intenses confine their largest grant to special solutions are as amount to others recognise the properties of the state of the

Since the functions of the Grand Juries have been taken up by the County Councils, I am pleased to have to report that three counties, which did not contribute anything towards the maintenance of children in Industrial Schools, have agreed to

do so in future.

PARENTAL CONTRIBUTION.

–		Reformato	rien.	Industrial Schools.	Total.
Dublin	: :	. £ a. 127 12 210 12	4	£ e, d, 129 18 10 545 15 5	& s. d. 257 11 2 756 7 8
Total,		338 4	7	675 14 3	1,013 18 10

As may be seen from the above Table the receipts from the Parental Money Collection amounted to £1,013 18s 10d. for the year. This shows a slight falling off from the sum collected in 1898 by £7 6s, 10d.

As long as the means are inadequate for compelling parents, when able, to pay towards the support of their children in Industrial Schools, there is not much likelihood that the amount of collection will improve.

The fact, that a great number of orphaus and children whose parents are unable to contribute have lately been committed, is another cause that the amount collected has not increased.

A third cause is the unwillingness of many Magistrates to make an order for contribution. The small sum of even a couple of pence a week would not press hard on any parent with a weekly

wage, while it would have the healthy effect of making them recognise their parental responsibility.

I have to report the death of Mr. Morgan, who was collector for the north side of the city. He is succeeded by Mr. O'Brien.

for the north side of the city. He is succeeded by Mr. O'Brie

LITERARY AND INDUSTRIAL TRAINING.

Of the 955 children admitted to the schools during the year, 532 could neither read nor write, 874 could read or write imperfectly, and 49 could read and write well. Many of the illiterates were just ten and twelve years of age.

The Assistant Inspector has during the year systematically examined the children in every school. In about thirty of the female schools the children are examined as well by the Inspectors of the National Board of Education.

The literary work in the different schools varies very much. This variety in results is more noticeable in girls than in boys' schools. Most of them are doing good work, and some excellent, while at a few schools the standard reached is below what might

reasonably be expected.

Kindergarten methods of teaching are employed in all the schools for junior boys and in most of the girls' schools, but they are not much used in the other boys' schools. These kindergarten methods have in some schools been only introduced quite garten methods have in some schools been only introduced quite

recently, and in only a few have they been in use for any length of time, but the number of schools using them is increasing Almost all use Probel's gifts, but one or two prefer methods of their own. The results attained were generally very satisfactory, the children's intelligence and defuness in manipulation being pleasantly developed at the same time.

The reading is often good, but in many schools there is a great difficulty in getting the children to speak above a whence. Where possible the reading lessons should be given in a separate class room, where the children could be taught to speak out without disturbing the other classes, and the reading should be supplemented by explanation, illustration, and questioning to secure that the children have an intelligent appreciation of the phrases and worst they have been using.

Writing is nearly always well taught and is on the whole vary creditable. This remark applies to both boys and girls' schools. In a few schools the deaks are of a uniform size throughout the school and the younger children suffer, in their writing especially, through the desks being too high. A few lower sized desks in these schools would put this right and would not cost much

In some schools great trouble had been taken to teach the children to recite poetry with proper emphasis and rhetorical effect, in others the result was an unpleasant sing-song, while in a few schools the repetition of poetry is not taught at all.

In geography there is great variety in the amount attempted at different schools, some teaching it very thoroughly, while others do not teach it at all. The outlines of the world, and the geography of Ireland should be taught to all, and as much more as the children have time for without interfering with their industrial training

The grammar taught is not of much educational value, and in the large majority of schools is a mere effort of memory, and does not develop the intelligence of the children. In many cases the beginners knew quite as much about it as children in the

higher classes

I have examined children in many schools when paying supprise visits, and have stood by, while teachers conducted their classes, to enable me to form an opinion on the efficiency of the method of teaching. The conclusion I have arrived at is, that the teaching supplied in the Industrial Schools are saving to teaching in the National Schools, and that the children are well up to, if not above, the average of National School and the teaching is conducted. Here are supplied to the teaching is conducted. Here are the teaching in the

The acquirement of knowledge was as varied and extensive as might be expected from children of their age; but they showed a painful want of comprehension on almost every subject. It's to be hoped those myrobhension of almost every subject. But to be hoped their of the new columnia system about to be established the great blot in primary education in this country will be efficied. I have advised Managers, with a view to their adoption, to read the rules and regulations of the Commissioners of National Education in Ireland for the year 1900, more especially with regard to the ordinary day school subjects, which are

(a) English (including, as sub-heads, reading writing, subline, grammar, and composition); (b) arithmetic; (c) hindengerba asia anasal instruction; (d) drawing; (e) object issexors and elementary science; (f) singing; (g) school discipline and phyrical drill, and in girls' schools in addition (h) scokery and laundry work, (b) needlework. Detailed syllabuses in such day school subject are issued by the Commissioners. Geography and moraling lesson that beachers school subjects, but during the moraling lesson the teachers school subjects, but during the two-lesson conveys sufficient knowledge of these subjects by the alternate use of library.

In the master of industrial training both boys and grits maintain the same standard set in previous years. In all the grist schools, with very few exceptions, there has been a marked improvement in every branch of industrial training during the year. While I am conscious of the state of excellence to which many of them there attended, I must mention two that in every respect come up to a high standard of efficiency. These are and St. Michael's School for Roman Cachillo (citik Werford, and and St. Michael's School for Roman Cachillo (citik Werford, and

In the former neatness, order, and cleanliness prevail at every point throughout the whole house, grounds, farmyard, &c. The girls take a bath every day. They are plainly dressed, but are models of neatness and cleanliness. Cookery, housekeeping, housemaid's work, laundry work, dairving, and dressmaking are all taught in a thoroughly practical manner. The children about to leave school are able to cut out and make all their own clothes. The six senior girls for the time being take their meals at a separate table. Each in turn acts as housekeeper and cook for a month, being allowed a tradesman's wages to support her family of six. After entering in her pass-book the weekly cost for house rent, coals, clothing, light, &c., she has the balance to spend on food. She purchases this at market value from the school stores. She has a small American stove to do her cooking, and is pretty sharply criticised by the members of her family for the manner in which it is done. Those girls, when they leave school, give the greatest satisfaction to their employers. With a slight difference the work in St. Michael's School is conducted in the same satisfactory manner.

I cannot speak so well for the boys schools, as, with the exception of one or two, their work showed so improvement on that of previous years. Training in the technical work of carpentry, boot-making, and tailoring, foc., is carried on with the same efficiency as hereto'ers, but no effort has yet been make to give the contract of th

Drawing is very well taught in nearly every school, but no its practical application. Agricultural operations engage a large number of boys; but in every school in which I examined then on this subject they showed utter ignorance of the simplest principles of agriculture. In all other occupations I found the same want of intelligent interest in their work.

Those that All Managers who study the welfare of this bress.

I hope that all alanagers who study the wellare of their boys will be quiet to adopt the new methods in primary education that will soon come into use. The beneficial results of hand-and-eye training, or a course of manual instruction, are forcibly shown in the following quotation from the Report of the Commission on Manual and Practical Instruction in Primary Schools:

"It makes the children alert; it makes them some intelligent; it is entirely a training of the intelligence, and there is no getting off with guesswork; it cultivates the power of rapid observation; it makes the children from the very first attach great importance to exactness; it goes to develop the inventive faculty; it is a relief refrashed and brightened by it, they have a greater zest fetheir book-work; it has been found an effectual check to morrousness; it gives the dull child a chance of getting on to the same plane with smarter children, and thus gives to dull children a useful incentive to execution in the other work of the school; the exercises in it are the most popular with the putil; proves the localces, too giving them increases leat and sell."

Admissions.

During 1899, 477 boys and 478 girls were admitted to Industrial Schools.

The numbers committed for each of the last ten years are given in the following table:—

-	YES	R.	-	Boys.	GIBLS.
2890, .				650 -	781
1891, .			-	531	716
1822, .				631	702
1893, . '				620	600
1894, .				904	673
1835, .			.1	602	728
1896,				693	636
1897, .			.1	622	778
1888, .			1	. 605	633
1880,				477	478

The number of children committed from Dublin for each of the three years 1897, 1898, and 1899, is as follows:—377 for 1897, 219 for 1898, and 94 for 1899.

In 1897, 924 children were committed for "begging" out of a total of 1,410 sent to Industrial Schools; in 1898, 676 out of a total of 1,238; and in 1899, 232 out of a total of 955. It is gratifying to find that in the procedure for obtaining

It is gratifying to find that in the procedure for obtaining orders of detention a more healthy tone exists. I consider that there are very few cases at the present time where a improper committal has been obtained.

During the year 35 cases were discharged by order of the Chief Secretary, 20 for illegal committed, and 6 for improper use of the Act.

There is a marked decrease in the committals of girls.

The prop rition of girls to boys in Industrial Schools in Ireland is abnormal. In 1896 there were 1,089 more girls than boys under detention, the numbers being 3,774 boys and 4,613 girls. In England, for the same year, there were 14,249 boys under detention as compared with 4,548 girls.

The class of children at present being committed is of a character more in accordance with the spirit of the Industrial Schools Act than has hitherto been the case, and I am pleased to find that Managers have not objected to receive such children.

It is to be hoped that an effort will be made by all those, who take an interset in the moral and material well-being of neglected children, to see that those of thom in immediate danger of falling into crime will be brought within the influence of the Industrial Schools Act. In this way a benefit will be conferred on the community as well as on the children.

I am glad to see that the new governing bodies have begun to

take an interest in the question of committals to Industrial Schools. No more important subject could engage their consideration than that of making provision for the neglected children in their counties, and seeing that all cases that come within the provisions of the Industrial Schools Act are brought before the magniturates with a view to harring them sent to an Industrial School. A small committee might with advantage be appointed to carry out this destroibe object, and three while the Commit could get informatically the country of the contraction of the contraction of these matters, as they contribute to the children's support, and I am sure Managers will give them every facility in this respect.

DISPOSAL OF CHILDREN.

The following Tables give the number of children discharged during 1899, and the mode of their discharge:—

-	Boys.	Girls.	Total,
Mode of Discharge—

The practice of disposal by returning the children to their friends is one that should be discouraged by Managers as far as possible. It is only warranted under exceptional circumstances, and the main object for getting children destand in Industrial Schools is to remove them from the contaminating influences of their home surroundings, and it is to be facurel that in most cases these conditions will not be found much improved at the time the children lawer the action.

When children are discharged, they are at an age that renders them most susceptible to good or bad influences, and in proportion as these predominate in their environments will their future lives be moulded for good or ill.

In most cases the parents who ask to have their children sent home are influenced by motives of gain from the earnings they

would bring in.

It should be impressed on parent and child that assistance to

the family can be made more liberal and permanent by placing the child in some respectable employment way from the baneful influences of its old home. As a general rule, I look on it as a failure on the part of the Manager, in the matter of disposal, to sand back a child to its parents or friends. Many Managers, more especially those of Convent Schools, are

often imposed on by missipresentation or the plausible statements of those vishing to get control of their children when they leave the school. A few vary distressing cases have come under my notice, where most serious consequences have followed, because the Managors were not aware of the dangerous surroundiness the children were being taken to.

When the provision of the Industrial Schools Act for England is applied to this country, by which Managers are granted control over their children for two years after their discharge, or till they attain the age of eighteen years, the dangers following discharge

can be very much lessened.

A very useful offer of assistance in this regard has been made by the Philanthropic Association of this city. In the case of Dublin children the members of the Association if requested to do so by Managers will make inquiries into and report on the character of the home surroundings the children would return to fallowed to go back to their fragillent well report residual to the control of the control of the control of the residual to the control of the control of the control of the total control of the control of the control of the control to the Secretary of the Association will get due attention. I believe this movement will be the means of asving many children who would otherwise drift back into criminal courses.

Нелети.

MDuring the year there were 68 deaths in Industrial Schools. This shows a death-rate of 8.072 per 1,000 for the children under detention. The death-rate of children aged from five to fifteen

in Ir-shand during 1899 was 3350 per 1,000. Notwithstanding the fact that a great number of children committed to Industrial Schools in Ireland were reared under conditions strongly pradisposing to a low state of vitality and depraved constitution, the death-rate is much higher than it should be. Of the 68 deaths that 'centred 54 were due to affections of the brain and lungs, mostly tubercular.

Managers cannot be too careful in taking precautionary measures to guard against the danger from contagious and infectious discusses. All cases of consumption should be removed from the school or where this is not possible they should be kept strictly

isolated.

When an epidemic of scarlatina or measles occurs in the neighbourhood of a school the Medical Officers should be instructed to report the fact to the Manager at the earliest possible moment, so that precautionary measures may be taken to motest the children from infection.

Cases of ophthalma, which in former years gave such trouble, are not much in evidence at the present time. There are a west-close in which this disease still appears; but with strict attention to cleanities and persistence in suitable treatment, I can in a short time to be able to report that all schools are free from it.

Chilblains in winter seem to be the source of the schools at the present time. The number of children who suffer from them and the aggravated character of the affection vary according to the attention bestowed on such matters as food, clothing, exercise, &c. The number of children in a school affected by chilblains is a fair index of the general care bestowed on them by the Manager; and while I do not expect that they can be be affected by children and the school of the conballty period of the control of the control of the control of the control of the concan be vary much reduced and the character of the affection can be own the con-

Having regard to the generally poor date of constitution of the class of children committed to their care, Managers should be all the more cardin to do everything in their power to preserve and promote their health. The main factors in doing this are good food, warm clothing, healthy well-ventilated rooms, and satishle excercise and recreations.

I am not satisfied with the scale of diet in most of the boys' schools. In quality, variety, and cooking there is much to be desired. I am giving attention to the schools most in need of reform in this matter.

In many of the schools the clothing is deficient, more especially in the winter, when on some occasions the thermometer registers several degrees of frest. Lads not particularly strong are accustomed to wear in that season the same clothing that served them during the summer. When, in addition, the food supplied is deficient in heat-producing properties and the living rooms are cold and cheeries, it is not to be wondered at that lung trouble, cliff and cheeries, it is not to be wondered at that lung trouble, cliff

blains and a generally low state of vitality should be much in evidence.

There are also deficiencies in matters of heating and ventilation in many schools. I have represented to Managers the dangers attendant on such defects and hope to see them soon remedied. I should like to see more attention given to matters of physical

exercise and out of door recreation than is done at present. They are essential for promoting health and happiness, both moral and physical. A field should be set apart where football, cricket, and other recognized games may be played in their season. In some schools this is encouraged and made an important feature in the training. The large schools should have a couple of teams for football and cricket, and they should be taught to play according to the strict rules of the game. Contests among themselves, as well as with outside teams should be encouraged. This would create a pleasant excitement and healthy rivalry in which the whole school would interest itself, and would brighten up and relieve the monotony of institution life. It would be well if the masters would take part and enter thoroughly into the spirit of the movement.

Military drill or free gymnastics should be practised at least once every day by the senior and twice daily by the junior boys. In several schools the want of careful training in this way was apparent in the careless manner the boys went through their drill as well as in their shuffling gait and want of smartness in their general appearance. Applied gymnastics, while very commendable as a means of developing certain sets of muscles, and giving lads a confidence in their physical powers, should be practised with great discretion. It often induces serious mischief, more especially in the case of growing and delicate lads. I think it should be confined to the strong senior boys.

In former reports, and repeatedly during inspection, I have

drawn attention to one great blot in the management of Industrial Schools in Ireland-the want of cleanliness in person and environment. This want was, from the first, more apparent in the boys' than in the girls' schools. I am pleased to say that at the present time there are only a few of the latter about which I have reason to complain in this respect.

I cannot say the same for the boys' schools. With few exceptions, I found no improvement in the matter of cleanliness, notwithstanding my repeated advice and warning. With most of the officials it seems as if there is an inherent antipathy to advocate or put in practice the virtue of clean-

liness.

One Manager put forward the plea that, as the boys returned to dirty, careless homes, too great a niccty in matters of cleanliness would keep them out of touch with their surroundings. An official in the same school could not see any advantage to be got from bathing. His own experience was that one could get on very well without it. He never bad a bath in his life.

In some of the schools the boys bathe only every four or five weeks, sometimes not so often. As many as four use the same

bath water. In others a bath is only taken in case of illness by the Doctor's orders, an occasional dip in the river or sea being the only attempt at general ablution.

Visitors are impressed by nicely laid out grounds, well-kept halls and corridors, by the shining faces of the lands over deas holiday collars, and by the orderly appearance of the beds in the dormitories under sone-white coverlets. It is the Inspector, the collars of the living reasons and other appearance agreed under predicting the living recens and other appearance of things under the clean collar, and often a condition of things under the white coverlets that is better imagined than described. I find it a very unpleasant duty to have to draw your attention to these matters, and I hope it will be for the last time, but should these matters, and I hope it will be for the last time, but should the schools sensity those that deserve cancsure in this respect.

I am pleased to acknowledge the valuable assistance I have received during the year from the Assistant Inspector and the other members of the staff carrying on the work of my department.

I have the honour to be, Sir,

Your obedient servant,

JOHN FAGAN, F.R.C.S.,

H. M. Inspector of Reformatory and Industrial Schools in Ireland.

APPENDIX.

APPENDIX I.

ie to Thirty-righth Report, d

No. 13,995.

Dublin Castle, 6th August, 1900.

Sib,

I have to acknowledge the receipt of your Letter of the 3rd instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Thirty-eighth Report of the Inspector of Reformatory and Industrial Schools in Treland for the year 1899.

I am.

Sir, Your obedient Servant.

D. HARREL

The Inspector of Reformatory and Industrial Schools.
